

NORIP

Suggested reference interval for Bilirubin in serum

Reference interval(s) suggested by NORIP

All: 5 – 24 $\mu\text{mol/L}$

Distribution of results in the main group and in subgroups

By 2.5 – 25 – 50 – 75 – 97.5 percentiles

	Percentiles				
	2.5	25	50	75	97.5
All	5				24

Comments to the distributions

- Markedly right tail skew.
- The differences between genders and age groups are too small to warrant partitioning.

Other comments

- The percentages outside the limits for the combined distribution in the Finnish population are high and partitioning should therefore be considered.
- For Iceland the number of reference individuals are too small and the uncertainty of the limits too high to make any decisions.

Suggested reference intervals

All: 5 – 24 $\mu\text{mol/L}$
